

Renal Network of the Upper Midwest Inc. Network 11 Annual Report 2010

Acknowledgments

Our thanks go to the many individuals in all Renal Network 11 facilities who contributed timely and accurate data throughout 2010. Your cooperation makes the information in this report possible and we sincerely appreciate your efforts. Thank you!

Dialysis and Transplant Patients who
Initiated ESRD Therapy in 2010

Renal Network 11

2010 Incidence Data

Definitions

As reported by Network 11, incidence reflects the number of people who were newly diagnosed as having end stage renal disease (ESRD) during a calendar year. The data in this section show the number of newly diagnosed ESRD patients who initiated ESRD therapy (dialysis or transplant) in 2010. It is important to note that:

- The home dialysis data do not reflect patients who transferred to home from in-center dialysis; and
- The transplant incidence data reflect only those patients transplanted in Network 11 in 2010 without preceding dialysis.

New patients are reported according to the patient's geographic residence to determine the ratio of new cases in an area (incidence) to that area's total population. That comparison results in an incidence rate, which is expressed as the number of new ESRD cases per million residents.

Importance of Incidence Rates

Incidence rates are expressed as the number of newly diagnosed ESRD patients per the general population. The rates are useful for future population projections, long-range health care planning, and for comparing incidence among regions. *Use caution when interpreting incidence rates in areas that have a small population base.* In such areas, a difference of only a small number of patients can make rates in different years appear to vary considerably. Incidence rates become increasingly consistent as the population base increases in size.

Patients Included

All newly diagnosed patients who begin a course of treatment for ESRD (in-center dialysis, home dialysis, or transplantation) at Network 11 ESRD facilities are included in the geographic origin and primary diagnosis tables. Almost all Medicare and non-Medicare patients are included for Network 11, even though the national ESRD Medical Information System collects data on Medicare patients only. (Nationally, approximately 5%–7% of ESRD patients are unentitled.)

Patients Excluded

Patients are not included in incidence figures if they are returning to dialysis following rejection of a kidney transplant, or if they are existing ESRD patients transferring into the Network 11 area. Also, these data may not include:

- Individuals who are never referred for treatment, or
- A very small number of Network 11 residents who may be treated at facilities in adjacent states.

Renal Network 11 2010 Incidence Data

Incidence Report

The following incidence report is arranged in two sections. The first section lists counts of newly diagnosed patients by state. The second lists incidence counts by patient characteristics, by state.

Incidence Rates, by State

Newly Diagnosed ESRD Residents in Network 11

Source of information: Network SIMS Database—Table #1. Date of Preparation: May 2011 Race: The categories are from the CMS-2728 Form. Diagnosis: Categories are from the CMS-2728. A diagnosis of 'unknown' is ICD-9 code 7999. This table cannot be compared to the CMS Facility Survey because the CMS Facility Survey is limited to dialysis patients receiving outpatient services from Medicare-approved dialysis facilities. This table includes 332 patients with transplant therapy as an initial treatment. This table includes 76 patients receiving treatment at VA facilities.

Data Tables

2010 Prevalence Data

Network 11 ESRD Patients on
Dialysis as of 12/31/2010

Prevalence of Patients on Dialysis in Network 11, as of December 31, 2010

Definitions

As reported here, prevalence reflects the number of people on chronic maintenance dialysis in Network 11 as of December 31, 2010. Patients are reported according to their geographic residence to determine and compare prevalence rates. Prevalence rates are expressed as the number of people on dialysis divided by the general population in the area (i.e., per million residents).

Importance of Prevalence Rates

Comparing prevalence rates allows you to see if a certain disease is significantly more prevalent in some areas than in others. Also, prevalence rates can be applied to future population projections. Such estimates are useful for long-range health care planning and for comparing prevalence among regions.

Patients Included

All patients in Network 11 who are on chronic maintenance dialysis in ESRD facilities at the end of the calendar year are included in the geographic origin and primary diagnosis tables. Almost all Medicare and non-Medicare patients are included for Network 11 even though the national ESRD Medical Information System collects data on Medicare patients only. (Nationally, approximately 5%–7% of ESRD patients are un-entitled.)

Patients Excluded

Except for the last page in this prevalence section, prevalence data reported reflect the dialysis patients only. Also, these dialysis prevalence data do not include a very small number of Network 11 residents who may be treated at facilities in adjacent states.

Prevalence Report

The following prevalence reports are arranged in four sections. The first section lists prevalence counts by state. Second, dialysis prevalence counts are displayed by patient characteristics, by state. Third, patients dialyzing in Network 11 are listed by state, by CMS certification number, by modality – with comparison data for 2009 and 2010. The last report is a single page summary of ESRD prevalence by state of residence, by modality for both dialysis and transplant patients.

Source of information: Network SIMS Database—Table #1. Date of Preparation: May 2011 Race: The categories are from the CMS-2728 Form. Diagnosis: Categories are from the CMS-2728. A diagnosis of 'unknown' is ICD-9 code 7999. This table cannot be compared to the CMS Facility Survey because the CMS Facility Survey is limited to dialysis patients receiving outpatient services from Medicare-approved dialysis facilities. The numbers may not reflect the true point prevalence due to different definitions for transient patients. This table includes 186 patients receiving treatment at VA facilities.

1. Dialysis patients' prevalence data are current and complete as of 12/31/2010

2. Effective 7/1/94, all ESRD Networks in the country transferred transplant follow-up reporting responsibilities to the United Network for Organ Sharing (UNOS). UNOS shares data with ESRD Networks, but many 2010 status reports are missing. Previously, Network 11 required confirmed functioning reports in order to count patients in this transplant prevalence report. For this table, Network 11 is counting all transplant recipients in this prevalence report unless reports have been received that the patient has returned to dialysis, been confirmed lost to follow-up, or died.

3. When comparing different prevalence tables in this report, there may be differences in numbers due to including or excluding patients at non-Medicare facilities, in-patient dialysis, and patients residing outside of Network 11.

Source of information: Network SIMS Database—Table #7. Date of Preparation: May 2011 Race: The categories are from the CMS-2728 Form. Diagnosis: Categories are from the CMS-2728. A diagnosis of 'unknown' is ICD-9 code 7999. This table cannot be compared to the CMS Facility Survey because the CMS Facility Survey is limited to those deaths reported by only Medicare-approved facilities. This table includes 33 patients receiving treatment at VA facilities.
